

## Moisture Resistant Gypsum Board

### DATA SHEET

Supertec Moisture Resistant Gypsum board has a specially formulated moisture resistant core and is intended for use in interior applications where higher than normal moisture resistance is required. Such areas may include drywall partitions to receive tiling, bathroom, kitchen areas or under exterior soffits in sheltered positions.

These boards are not suitable for prolonged immersion and are thus not recommended for use in saunas, communal shower rooms, swimming pool enclosures or areas continuously exposed to excessive high humidity or direct driving water.

Supertec Moisture Resistant Gypsum boards have been tested to SANS 266 and GB/T 9775-2008.

#### Physical Properties:

Thickness:	Currently available in 12mm
Width:	1200mm
Length:	2.7m & 3m
Rectangularity:	<5mm
Paper:	Made from recycled materials, green paper face
Edges:	Taper Edge
Longitudinal Breaking Load:	>340N
Surface Water Absorption:	<160g/m <sup>2</sup>

#### Storage and Handling:

- Not recommended for continuous exposure to temperatures exceeding 49°C.
- All materials should be kept dry and stored indoors.
- All materials should be neatly stacked flat on a level platform and off of the floor or on a damp proof membrane.

Please contact us should any further information be required.
